

Close Lab 8: JavaFX LayoutAssignment

Write a JavaFX multiplestage application which has at least two stages, a primary one and a secondary one. The primary stage should have a gridpane which has at least a 2*3 grid, and on each cell of the grid, please place a different node from at least one of the three types: a UI control or a shape or an image view, etc. On the secondary stage, you should design a layout with binding property. Your overall project design should reflect a theme, for example, a music event commercial, etc.

Submission

Follow our class coding standard to complete this lab, compile and run it, check out for credit.
